

C-RADS™ Feature descriptors for polyps and masses

Lesion Size (mm)

For lesions 6 mm or larger, the single largest dimension of the polyp head (excluding stalk if present) on either multiplanar reconstruction (MPR) or 3D views. The type of view employed for measurement should be stated.

Morphology

- Sessile – broad-based lesion whose width is greater than its vertical height
- Pedunculated – polyp with separate stalk
- Flat – polyp with vertical height less than 3 mm above surrounding normal colonic mucosa

Location

- Refer to named standardized colonic segmental divisions: rectum, sigmoid colon, descending colon, transverse colon, ascending colon, and cecum.

Attenuation

- Soft-tissue attenuation
- Fat

3D = three-dimensional
