

Initial MOD: What was the *first thing to trigger the work-up* that ultimately led to the recommendation for biopsy? Assign MOD based on prior imaging and clinical criteria.

Category S: work-up triggered by a finding on an image-based screening examination in an *asymptomatic* patient

Sma: screening 2D mammo (NO dbt)

Sdbt: screening mammo with dbt with synthetic or full field 2D

Sus: screening breast ultrasound

Smri: screening breast MRI

Scem: screening contrast enhanced mammography

Snuc: screening nuclear medicine examination

So: screening with other modality (CT etc)

Category P: patient symptom or finding or provider detected finding triggers a diagnostic examination and work-up

Pat: patient detected sign or symptom on self-exam

Ppro: provider detected physical exam finding during clinical breast exam

Ppp: patient or provider detected sign or symptom, unable to determine which was first

Category N: not one of the above

N: not image-based screening, not patient or provider detected sign or symptom. Rare cases of incidental findings on body CT, for example.
