## Intussusception – Air Reduction Safety Checklist

Check	Requirement
	Nurse (from ED or IP Unit) accompanies and monitors patient during procedure
	Intravenous Line in Place
	Patient on Monitoring
	Pediatric Surgical Service aware of patient / attempted reduction
	18g needle on hand (for potential tension pneumoperitoneum)
	Additional Presence: If patient ill-appearing (lethargic, septic, not fighting rectal tube) – consider requesting additional back up in room during procedure (ED faculty/fellow, Surgical faculty/fellow, or equivalent) because of high risk of arrest
	Obtain scout (AP) radiograph (consider decubitus as needed)
