

TMIST

Tomosynthesis Mammographic
Imaging Screening Trial

Shape Breast Cancer Screening Policy

Take Part in TMIST!

- Identify women in which tomosynthesis may outpace digital mammography at reducing advanced cancer development
- Create world's largest bio-repository to tailor future risk-based screening policy

Strengthen Your Practice

- **Receive \$500** for data submission for each insured and uninsured patient enrolled (includes payment for first screening exam)
- **Receive \$150** for each subsequent screening exam for participants with private insurance, Medicare or Medicaid — in addition to insurance payment

Expand Access to the Latest Care in Your Area

- **Receive \$288** per screening exam (\$138.17 for performing exam + \$150 for data submission for exam) for uninsured participants who qualify for charity care at your site
- Empower your practice to offer the latest care to the underserved and expand participation in clinical trials

Move Breast Cancer Screening Forward

- TMIST is necessary to inform tomosynthesis clinical and payment updates
- Decision makers rarely update policy without such a randomized controlled trial
